

Michael Tortorice

Michael Tortorice was almost a one man architect class when he attended Kings Park High School. His skills and imagination won him praise and awards in his senior year. It was only natural that he would follow the architectural path as a career.

Kansas University and its well known architectural department was his home for five years. He studied Environmental Design at SUNY Buffalo and Naval Architecture at SUNY Maritime College. Michael joined Baldassano Architectural Group and received ten years of valuable, hands on knowledge in his chosen career. He has spent the last seven years as a partner in BH & A, an architectural firm in Riverhead.

A specialist in educational buildings, Michael has been involved with many East End districts plus St. Anthony's High School in Huntington. Libraries have been a major center of attention with projects from Riverhead to Babylon Library. An interesting project was the L.I. Ducks Ball Park in Central Islip.

He has been active in developmental plans for zoos and aquariums. He is attached to the Kings Park Heritage Museum and actively involved in revitalization plans promoted by the Museum. Talk about realizing your school days ambitions.
